

► Our Secure Containers

Whether it's a secure space for staff to work, or an unmanned solution, our experienced security professionals can work with you to design a container solution for your needs. Our Secure Containers:

Are purpose-built for sensitive work and come in manned and unmanned options that are constructed and fitted out to the highest security specifications.

Are based on ISO shipping containers and can work in a variety of terrains, locations and situations.

Provide reliable solutions for classified work and are suitable for use by Commonwealth, Defence, and Industry entities requiring a Physical Security Zone 5 for SCI and SAP material and networks.

Are fully deployable - we work with an Australian-owned and operated logistics partner to get secure containers to where you need them, when you need them – providing end-to-end security that you can depend on.

► Key Benefits

- Deployable by land, sea or air
- Quick build and certification
- BYO ICT
- Certifiable under PSPF and DSPF
(IAW the intent of ASIO Tech Note 5/12 Zone 5)
- Ongoing maintenance and support
- Purchase or leasing arrangements available
- Bespoke, sovereign capability

We offer solutions that support manned and unmanned operations.

▶ Unmanned

Have a variety of uses, including as data centres or secure storage.

Can last for extended periods without external power and can be operated in extreme environments and temperatures.

Fully RF secure and are tested prior to every deployment.

Virtually indistinguishable from a standard ISO container, allowing for discrete deployment.

▶ Manned

Have been optimised for use as operational centres but we have maintenance, T&E and laboratory configurations available as well.

In a self-contained, operations centre style, 20-foot ISO setup, support up to four operators working at the highest security classification.

Come with RF shielding installed, ensuring the highest levels of security for the most sensitive of work.

Have multiple network connectors, and are both physically and acoustically secure (rated to DW45 for Acoustic security of TS conversations).

Elysium EPL is a veteran-powered Australian SME that works with government and industry organisations to improve their business performance through the provision of trusted advice and comprehensive solutions with enduring value.
